typedef basic\_string<char> string;

String class

Strings are objects that represent sequences of characters.

The standard string class provides support for such objects with an interface similar to that of a [standard container](#) of bytes, but adding features specifically designed to operate with strings of single-byte characters.

The string class is an instantiation of the [basic\\_string](#) class template that uses char (i.e., bytes) as its *character type*, with its default [char\\_traits](#) and [allocator](#) types (see [basic\\_string](#) for more info on the template).

Note that this class handles bytes independently of the encoding used: If used to handle sequences of multi-byte or variable-length characters (such as UTF-8), all members of this class (such as [length](#) or [size](#)), as well as its iterators, will still operate in terms of bytes (not actual encoded characters).

Member types

member type	definition
value_type	char
traits_type	<a href="#">char_traits&lt;char&gt;</a>
allocator_type	<a href="#">allocator&lt;char&gt;</a>
reference	char&
const_reference	const char&
pointer	char*
const_pointer	const char*
iterator	a <a href="#">random access iterator</a> to char (convertible to <a href="#">const_iterator</a> )
const_iterator	a <a href="#">random access iterator</a> to const char
reverse_iterator	<a href="#">reverse_iterator&lt;iterator&gt;</a>
const_reverse_iterator	<a href="#">reverse_iterator&lt;const_iterator&gt;</a>
difference_type	<a href="#">ptrdiff_t</a>
size_type	<a href="#">size_t</a>

Member functions

<b>(constructor)</b>	Construct string object ( <a href="#">public member function</a> )
<b>(destructor)</b>	String destructor ( <a href="#">public member function</a> )
<b>operator=</b>	String assignment ( <a href="#">public member function</a> )

Iterators:

<b>begin</b>	Return iterator to beginning ( <a href="#">public member function</a> )
<b>end</b>	Return iterator to end ( <a href="#">public member function</a> )
<b>rbegin</b>	Return reverse iterator to reverse beginning ( <a href="#">public member function</a> )
<b>rend</b>	Return reverse iterator to reverse end ( <a href="#">public member function</a> )
<b>cbegin</b>	Return const_iterator to beginning ( <a href="#">public member function</a> )
<b>cend</b>	Return const_iterator to end ( <a href="#">public member function</a> )
<b>crbegin</b>	Return const_reverse_iterator to reverse beginning ( <a href="#">public member function</a> )
<b>crend</b>	Return const_reverse_iterator to reverse end ( <a href="#">public member function</a> )

Capacity:

<b>size</b>	Return length of string ( <a href="#">public member function</a> )
<b>length</b>	Return length of string ( <a href="#">public member function</a> )
<b>max_size</b>	Return maximum size of string ( <a href="#">public member function</a> )
<b>resize</b>	Resize string ( <a href="#">public member function</a> )
<b>capacity</b>	Return size of allocated storage ( <a href="#">public member function</a> )
<b>reserve</b>	Request a change in capacity ( <a href="#">public member function</a> )
<b>clear</b>	Clear string ( <a href="#">public member function</a> )
<b>empty</b>	Test if string is empty ( <a href="#">public member function</a> )
<b>shrink_to_fit</b>	Shrink to fit ( <a href="#">public member function</a> )

Element access:

<b>operator[]</b>	Get character of string ( <a href="#">public member function</a> )
<b>at</b>	Get character in string ( <a href="#">public member function</a> )
<b>back</b>	Access last character ( <a href="#">public member function</a> )
<b>front</b>	Access first character ( <a href="#">public member function</a> )

Modifiers:

<b>operator+=</b>	Append to string ( <a href="#">public member function</a> )
<b>append</b>	Append to string ( <a href="#">public member function</a> )
<b>push_back</b>	Append character to string ( <a href="#">public member function</a> )
<b>assign</b>	Assign content to string ( <a href="#">public member function</a> )

string::find_first_of
string::find_last_not_of
string::find_last_of
string::front
string::get_allocator
string::insert
string::length
string::max_size
string::operator+=
string::operator=
string::operator[]
string::pop_back
string::push_back
string::rbegin
string::rend
string::replace
string::reserve
string::resize
string::rfind
string::shrink_to_fit
string::size
string::substr
string::reverse
<b>member constants:</b>
string::npos
<b>non-member overloads:</b>
getline (string)
operator+ (string)
operator<< (string)
operator>> (string)
relational operators (string)
swap (string)

<b>insert</b>	Insert into string (public member function )
<b>erase</b>	Erase characters from string (public member function )
<b>replace</b>	Replace portion of string (public member function )
<b>swap</b>	Swap string values (public member function )
<b>pop_back</b>	Delete last character (public member function )

**String operations:**

<b>c_str</b>	Get C string equivalent (public member function )
<b>data</b>	Get string data (public member function )
<b>get_allocator</b>	Get allocator (public member function )
<b>copy</b>	Copy sequence of characters from string (public member function )
<b>find</b>	Find content in string (public member function )
<b>rfind</b>	Find last occurrence of content in string (public member function )
<b>find_first_of</b>	Find character in string (public member function )
<b>find_last_of</b>	Find character in string from the end (public member function )
<b>find_first_not_of</b>	Find absence of character in string (public member function )
<b>find_last_not_of</b>	Find non-matching character in string from the end (public member function )
<b>substr</b>	Generate substring (public member function )
<b>compare</b>	Compare strings (public member function )

**Member constants**

<b>npos</b>	Maximum value for size_t (public static member constant )
-------------	---

**Non-member function overloads**

<b>operator+</b>	Concatenate strings (function )
<b>relational operators</b>	Relational operators for string (function )
<b>swap</b>	Exchanges the values of two strings (function )
<b>operator&gt;&gt;</b>	Extract string from stream (function )
<b>operator&lt;&lt;</b>	Insert string into stream (function )
<b>getline</b>	Get line from stream into string (function )
